

## Jump Statements in 'C'

Three Jump statements

- (i) break
- (ii) continue
- (iii) goto

- (a) They must be used inside a condition body.
- (b) They must be the last statement inside the condition body.

switch(<variable>)

```
{
  case <value>: <first case statement>;
               break;
  case <value>: <second case statement>;
               break;
  . . . . .
  . . . . .
  default: <default statement>;
           break;
}
```

```
while(<condition>)
{
  <statements>;
  <New_value>;
}
```

```
do {
  <statements>;
  <New_value>;
} while(<condition>);
```

```
while(<Condition>)
{
  <statements>;
}
```

```
do {
  <statements>;
  if(<Condition>)
  {
```

```
  <statements>;
  break;
}
<New_value>;
while(<Condition>);
```

```
  }
  <New_value>;
} while(<Condition>);
```
